A KIUWAN SUCCESS STORY

BUSINESS NEEDS

Gilberto Florez, QA & IT Architecture and Integration Manager

With a multi technology environment for our devs, we sought a solution that could **encompass unlocalized teams globally distributed**, working in complex environments with different programming languages and technologies.

We needed quality assurance with regards to the main quality code parameters (maintenability, security, reliability, etc.) of our applications and also the development deliverables, ideally with a centralized platform since we required **governance of our application portfolio** that gave us objective data to drive our decisions.

We found the application governance, deliveries control & the analysis of our entire portfolio to be very compelling, given it went beyond our initial scope of need.

SOLUTION

Kiuwan Enterprise Software Analytics offers a hybrid solution, both cloud as well as on premise, which proved ideal in finding a solution for the **collaborative work needed** between our internal teams and our external providers. With no need to invest in infrastructure or extra effort, their multi technology solution encompasses the entirety of our application stack.

A KIUWAN SUCCESS STORY

IN DETAIL

- ✓ **Standardization** of the measurements of quality and security with an minimal executable set model
- ✓ Have a **baseline** of the state of quality and security of the applications and associated technical debt, based on market best practices standards.
- ✓ Specific **plan of action** that improves the quality and security for each of the applications.
- ✓ Analysis and **integration into the lifecycle** of the status of development deliveries and obtainment of reports of defects and specific vulnerabilities introduced in each one.
- ✓ **Automatic countable contractual SLA** on delivery of the applications, based on measured levels of quality and security, enforcing suppliers adherence.
- ✓ Calculation of the rest of the AM SLAs and integration within a **Balanced Scoreboard**
