Temporal License not Valid yet

Problem

Kiuwan Local Analyzer (KLA) does not start, raising an error message like below:

```
ERROR running target "run" - Temporal license not valid yet
com.optimyth.license.model.LicenseExpiredException: Temporal license not valid yet
```

Solution

This error happens when KLA detects that the license is not valid (yet) because your computer time is before the expected license validity time.

The solution is easy: adjust your computer time to the official time

The most common way to do it is to get **synced with an NTP Time Server**, although you can also **manually adjust your time**.

If you are behind the official time for a matter of minutes, just wait. Once the license validity time matches your computer time, the error will disappear.
