- [Related articles](#)

Problem

Your Local Analyzer doesn't run and displays the following error message :

Engine update cancelled by a blocking process of type: update (or analysis)

Solution

First of all, check your Internet connectivity.

Sometimes an automatic upgrade fails due to some blocking conditions.

Check at `$(AGENT_HOME)/temp` for lock files (*.lock) and delete them. This action will remove any pending block and will release the automatic upgrade.

See section [Kiuwan Local Analyzer Does not Start after Automatic Upgrade](#)

You can also download a new Kiuwan Local Analyzer distribution by logging into [Kiuwan](#) and clicking on **Download Kiuwan Local Analyzer** in the top-right menu.

Please visit [Kiuwan Local Analyzer CLI - Command Line Interface](#) for further information.
