- [How to find defects by Review Status](#)

Review Status of Defects

After an analysis, some time needs to be dedicated to reviewing the defects found by Kiuwan before they are submitted to the developers.

Reasons to review defects can be various, e.g. to confirm if it's a true or false positive.

For this process, Kiuwan has the option of setting a Status for every defect:

Status name	Description
To review	The defect is open for review.
Reviewed	The defect has been reviewed

It is also possible to add Notes to the review process.

After the review:

- Proceed to its remediation (for example by creating an [Action Plan](#) and [Export it to Jira](#))
- Or mute it (for any specific reason, see [Muting Defects](#) for further info)

Note for the Kiuwan IDE Plug-In

Defects' Review Status is exported to [the Kiuwan IDE Plug-In](#) and displayed within Server Defects List.

This allows informing developers of those defects that should be reviewed.

How to set the Review Status of a Defect

Select the concrete defect, open the menu at the right and select **Status**.

The **Defect Status** window appears.

Select the review status and add a note (if needed).

Click **Apply**. The defect status is marked with a label on the Defects page.

Kiuwan CODE ANALYSIS										
CODE ANALYSIS										
ARCHITECTURE INSIGHTS LIFE CYCLE GOVERNANCE										
FILTER SUMMARY METRICS DEFECTS ACTION PLANS										
2024/01/01 - 2024/01/31
