- [Scope of Changes](#)

[How to change Licenses Policies](#)

- [Global Licenses Administration](#)
  - [By License](#)
  - [By Component](#)
- [Licenses page](#)
  - [By License](#)
  - [By Component](#)
  - [Insights Management](#)

## Licenses Policies Management

As explained in [Insights Licenses > LicenseRisk](#) there's a default policy to assign a License Risk to licenses found during Insights analysis.

The **default License Risk Policy** works as follows :

- **High** is associated with **Copyleft, Copyrighted, and Proprietary**
- **None** is associated with **PublicDomain, Permissive, and WeakCopyleft**
- **Unknown** is associated with licenses without a License Type.

This default policy is quite conservative. It raises an alert when some license might have a legal implication. But, depending on the specific case, the alert might not apply to your organization or you don't need to be alerted about certain licenses.

In these cases, Kiuwan Insights' **Licenses Policies** lets you **change the License Risk of any License** to suit your specific needs.

### Required Permissions

**Permissions**

To make changes to License Policies, **only users granted with Application Management permission are allowed to access Policies Management modules.**

### Scope of Changes

Custom changes to the level of License Risk of a License can be applied to several **scopes**

Changes to the level of Risk of a License		
Scope	Precedence	Meaning
Global	1	Change to the license is global, i.e. <b>it applies to all components of all the apps that are using that license.</b> The change applies to current components as well as new components discovered in future analyses.
Application	2	Change to the license <b>applies to all components of the selected app that are using that license.</b> The change applies to current components as well as new components discovered in future analyses. Components belonging to other app using this license remain unchanged
Component	3	Change to the license <b>applies to the selected component, regardless of the app using the component</b>
App-Comp	4	Change to the license <b>applies to the selected component in the selected app.</b> Selected components using this license belonging to other app remain unchanged.

The **precedence** column means the applicability in case of conflicts, **being applied the case with higher precedence value.**

For example, we could have configured:

- License L is High for application A (application scope: 2)
- License L is Medium for component C (component scope: 3)

What will be the level for component C in application A? Precedence 3>2, L will be Medium for C in A.

**Changes are retroactive**

Changes to Licenses are applied retroactively, i.e. changes will be applied not only to future analyses but also to past analyses

## How to change Licenses Policies

Changes to Licenses Risks can be done on several pages:

Scope	Kiuwan Insights Page
Global and/or Application	<ul style="list-style-type: none"><li>• Licenses &gt;&gt; Licenses Policies &gt;&gt; By License</li><li>• Licenses (selecting a licensing row and opening the license menu)</li><li>• Insights Management (admin menu)</li></ul>
Component and/or App-Comp	<ul style="list-style-type: none"><li>• Licenses &gt;&gt; Licenses Policies &gt;&gt; By Component</li><li>• Licenses (selecting a licensing row, opening the component row and clicking on the component menu)</li><li>• Insights Management (admin menu)</li></ul>

## Global Licenses Administration

Kiuwan Insights enables you to globally administer the licenses found within your Kiuwan account.

You can access the **Global License Admin** by selecting Licenses Policies at the License tab's hamburger menu.

## Global scope

- By selecting the **Custom Global Risk** dropdown list at the License level, you will change it to the **Global scope**.

## Application scope

- Additionally, by selecting the **Custom Risk** dropdown list of an application, you will change it to the **Application scope**.

See [Scope of Changes](#) for an explanation of scopes.

## By Component

When **By Component** tab is selected, the full list of Components used by your application is displayed

Click **Modify** to open the **Modify License Policy** dialog.

**Component scope**

- By selecting the **Custom Global Risk** dropdown list at the Component level, you will change it to **Component scope**.

**Application scope**

- Additionally, by selecting the **Custom Risk** dropdown list of an application, you will change it to the **App-Comp scope**.

See [Scope of Changes](#) for an explanation of scopes.

**Licenses page**

You can modify the License Risk of any license/component from the License tab.

**By License**

Just click on the **dropdown menu** at the right of a specific License and select **Modify Policy**.
