

# Can I scan my source code without uploading it to the cloud?

Yes. If you do not want to upload your code for security reasons, you can run your analysis locally instead with [Kiuwan Local Analyzer](#).

Your results (defects, metrics, etc.) are uploaded securely to the Kiuwan Cloud, and you will view them in the dashboard.

Secure Socket Layer (**SSL**) technology protects information sent to Kiuwan using encryption and authentication server. It ensures that your data in transit is safe, secure, and visible only to registered users in your organization.
