

# How long does a scan take to complete?

The length of a scan depends on the programming languages and the number of lines of code (LoC).

We tested the speed to give you an idea and these are the results:

- 577k LoC in Java ~ 15 minutes
- 32k LoC in Python in ~ 12 minutes
- 9m LoC in C/C++ (Juliet v1.3) in ~ 23 hours

Results may vary.
