

Does Kiuwan store my application's uploaded source code?

Kiuwan offers two different analysis modes:

1. **Analyzing in the cloud:** In this case, you upload the source code to the Kiuwan Cloud. The source code is then deleted as soon as the analysis is finished.
2. **Analyzing locally:** In this case, analyzing locally, the source code never leaves the local machine: it is locally analyzed. The generated results are encrypted and securely uploaded to Kiuwan Cloud. Once received, those results are used to calculate metrics to be displayed to the Kiuwan users.
