

Deliveries and Continuous Integration

Deliveries and Continuous Integration

Kiuwan allows full integrated analysis in a **Continuous Integration** system.

If you are using Jenkins, the **Kiuwan Plugin for Jenkins** allows specifying analysis scope and options when integrating Kiuwan in Jenkins jobs.

Please visit [Jenkins plugin \(old\)](#) for further info on Kiuwan Plugin for Jenkins and how to launch baseline /deliveries analysis.

For other CI systems, you can use Kiuwan Local Analyzer (KLA) in Command Line Interface (CLI). KLA in CLI mode allows to fully specify at runtime the above options and therefore be integrated into any script embedded into your CI system. Please visit the [Command Line Interface \(CLI\)](#) for further information on running KLA in CLI mode.
