- Kiuwan events and notification
- Kiuwan on-premises - Automatic data purge
- Kiuwan Analysis Management

Kiuwan events and notification

We have programmed the generation of events triggered by user actions and system situations. Also, we have provided the possibility for an administrator to consume these events and configure notifications via mail based on these events, the main tabs in this screen are the following:

- Actions: Keep track of all the events to your Kiuwan account.
- Notifications: Review all the generated notifications
    - Configurations: Configure the recipients, the type of notifications you want to send to each user, and assign them to different users

For more information, please review Activity Module.

Kiuwan on-premises - Automatic data purge

We have added functionalities to allow the administrator of an on-premise installation to cleanup old analysis and related information.

Some of these functionalities are also available for cloud administrators.

- The Automatic data purge configuration includes new properties and scheduled tasks to implement file and data purge.

For more information, please review Automatic data purge.

Kiuwan Analysis Management

Manage all Analyses of your applications in a centralized view:

- Filter the analyses subset you want to retrieve.
- Navigate through your analyses results.
- Remove your analyses:
    - Remove individual analyses.
    - Bulk deletion: When you select this option, you can select between deleting analyses that match the selected filter or deleting handpicked analyses.

For more information, please review Analyses Management.
