New Features

UI for user definition of neutralizers, sources, and sinks

This release includes a new Graphic User Interface (GUI) tool to allow customers to define and modify his custom metadata files. This tool should ease the process of the following actions:

- Finding the existing metadata files (both products and custom)
- Seeing the default product metadata
- Avoiding conflicts between different definitions (for all the system/for an application/for a given analysis). Only custom metadata is allowed to be edited - but it is possible to see all existing metadata.

The tool should help the configurator to see possible alternative definitions and values for each field, it includes some tooltips and examples.

Fixed Issues

MT9 changes

SAS-6460 Unable to view muted lines for developers no "mute defects" role
SAS-6313 Password recover page showing error when pressing enter
SAS-5560 Feature Request for Action Plans and Jira
SAS-4955 Rules compare is not working as expected: missing modified rules
SAS-5373 Rules compare is not working as expected when new parameters in rule definition
