

Crossings

Go to **Governance > Crossings** to access the Crossings section.

This screen displays a table where you can pick the metric which values you want to see, crossing the data of two different portfolios you want to compare.

This can help to make decisions depending on the crossing selected.

For example, you can see the lines of code (metric) developed by your different providers (portfolio 1) according to the business value of the applications (portfolio 2):

The screenshot shows the Klean Analytics dashboard with a 'CROSSINGS' table. The table has columns for 'Rate', 'Provider', 'Columns', 'Business value', 'Items', and 'Risk index'. The data is organized into rows for different locations, each with a 'Rate' and a 'Provider'.

Rate	Provider	Columns	Business value	Items	Risk index			
		Critical	High	Medium	Low	Very low	Unengaged	Average
100	Chile Factory	-	12.50	13.45	-	-	-	38.00
-	China Factory	-	61.75	67.58	-	8.12	-	27.00
100	Mali Factory	100	22.75	-	43.54	-	-	36.44
98.24	Engageur	98.24	100	100	18.17	100	-	88.41
98.97	South Africa	98.97	30.75	100	-	4.12	-	34.27
70.00	Spain Factory	70.00	-	90.24	38.00	100	-	65.00
42.42	Unengaged	42.42	-	-	-	-	-	42.42
Average		94.00	30.96	68.75	19.20	5.02	-	60.41
