

KIUWAN CODE SECURITY

Kiuwan Code Security enforces a rigorous approach in the detection of security vulnerabilities. We strive to meet the most stringent requirements and our compliance reports meet all well known market standards (**OWASP, CWE, MISRA, NIST, PCI, and CERT** among others). Integrate Kiuwan Code Security in your development process and increase the overall security of your applications while reducing risk and cost thanks to early detection and correction of newly introduced vulnerabilities.

Helping developers shield their applications, **detecting and helping eliminate** security vulnerabilities

Kiuwan Code Security can secure your business
from cyber threats

Some detected vulnerabilities

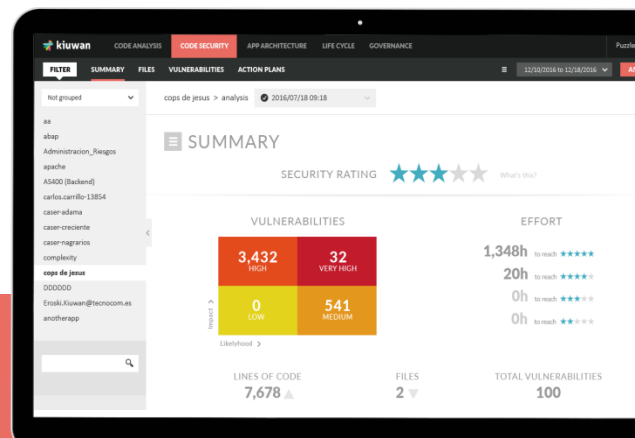

- Uninitialized Variables
- Application Misconfiguration
- Credential/Session Prediction
- Directory Indexing
- Insufficient Authorization/Authentication
- Automatic Reference Counting
- Cross Site Request Forgery
- Information Leakage
- Insufficient Transport Layer Protection
- Insufficient Binary Protection
- Cross Site Scripting
- Injection Attacks
- Interprocess Communication
- OS Commanding
- Insecure Cryptography
- SQL injection
- Cryptographic Related Attacks
- Buffer Overrun
- Free Non-Heap Variable
- Use After-Free
- Double Free/Close
- Format String Vulnerability
- Return Pointer To Local
- ...

Some reliability issues

- Data Race
- Deadlock
- Null-Pointer Dereference
- Division by zero
- Double close
- Dangerous Function Cast
- Resource Leak
- ...

Features

- Kiuwan Code Security offers high level visibility over the security **risks** your applications are facing. We use **market standard ratings** to determine the criticality of the vulnerabilities found.
- You can create **action plans** to remediate the defects found, either determining the **effort** required by the development teams or the **rating** you want to achieve.
- You can determine the way you view the criticality of your applications, distributed by **files** or **vulnerabilities**.
- A **polyglot tool**, Kiuwan Code Security boasts the most comprehensive coverage of programming languages, to ensure none of the applications in your portfolio are left behind.

“Powerful and clean dashboards show you exactly the information you need”

Kiuwan Code Security enables developers and security experts alike to identify and remediate cyber threats in a blazingly fast, collaborative environment, with seamlessly integration in your SDLC

- ✓ Executive overview. Kiuwan Code Security offers tailored reports with industry standard security ratings for your application portfolio.
- ✓ Configure the level of criticality of your applications
- ✓ Kiuwan Code Security has one of the most comprehensive set of coding rules

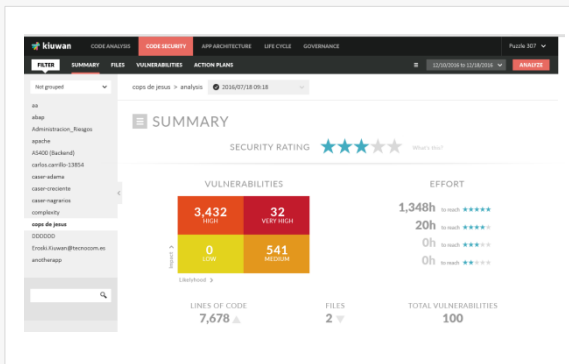

A polyglot solution

covering the main programming languages:

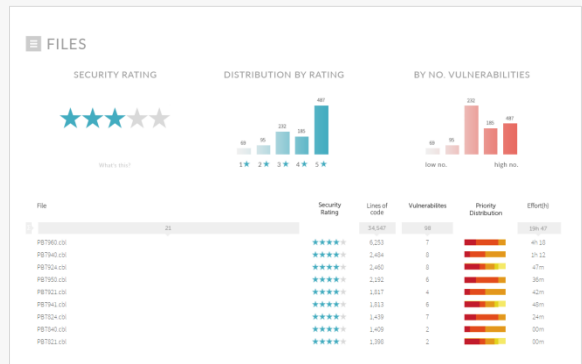

... among others.
