

KIUWAN ARCHITECTURE

In an ever changing landscape, the one constant is the need for enterprises to optimise their existing application investments.

They are doing this by enhancing application functionality and pursuing reductions in application maintenance and support costs. In fact, the transformation of an existing portfolio can reduce the overall costs of ownership and, at the same time, directly align applications with business strategy.

The transformation of an existing portfolio can **reduce the overall costs** of ownership

To achieve this, they need information about their application portfolio at different levels.

Kiuwan already provides relevant and detailed information regarding application portfolios, based on objective data gathered from the applications themselves. These include key application aspects like security, maintainability and reliability to help you understand your applications.

Now, with Kiuwan Architecture we are shedding new light into applications to complete the picture.

This new light casts comprehensive visual application maps with state-of-the-art visualization layouts and real-time automatic synchronization of all Enterprise application components.

Kiuwan Architecture stands out

No configuration needed

Fully customizable – visually & conceptually

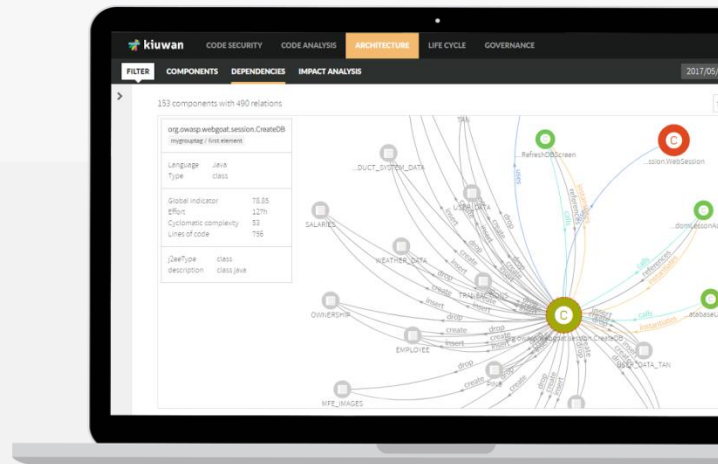

Request a free demo or quote and discover how Kiuwan Architecture can help you rationalize your business

New Benefits for the Enterprise

- **Detects and surfaces** the dependencies in your applications, giving you the ability to truly understand your architecture and application's structure.
- **Run impact analysis** for typical application maintenance tasks: planning, change requests and new functionality etc.
- **Produce and correlate** with pinpoint accuracy a detailed report on application components to inform your business impact decisions
- **Understand** in a visual way the complexity behind changes in your applications.
- **Simplify and rationalize** IT environments, identifying those areas of value within the application portfolio.
- **Evaluate** the collateral effects and negative impacts associated with the implementation of new specifications of the systems.
- **Support** application migration and modernization initiatives with the right information in your hands.
- **Verify** that the application's software elements are compatible with the architecture normative (such as illegal dependencies detection etc).
- **Develop** obsolescence analysis to detect the components which are not used by the system that consume resources and are a source of potential errors.

New Efficiencies for the Enterprise

- **Decrease** application time-to-market
- **Reduce** application downtime
- **Increase** application comprehension for developers
- **Decrease** application maintenance and support costs

“Powerful and clean dashboards show you exactly the information you need”

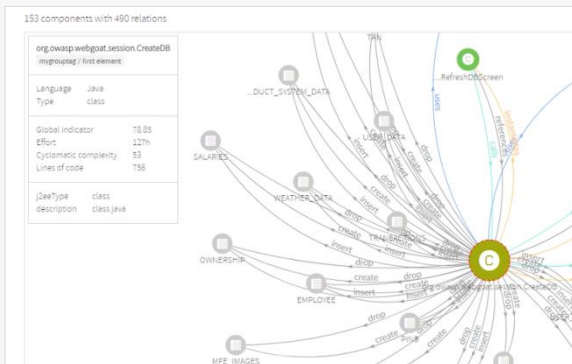

thinkapps

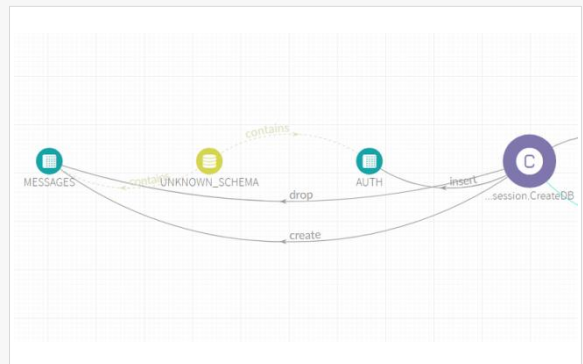

Kiuwan Architecture makes the Kiuwan platform a unique solution for the enterprise.

It provides different stakeholders with a comprehensive view, trends and insights of their application portfolio, allowing them to focus resources on areas of critical concern, starting from the initial phase of production all the way to delivery.
