- [Deliveries](#)
 - [Monitoring the execution of deliveries](#)

Life Cycle Dashboard

This page displays information on existing deliveries, allowing you to take action on them.

It is possible to search for deliveries specifying different search criteria:

Name	Description
Date range	Search deliveries launched within a date range (using From and To date fields)
Provider	Search deliveries that belong to the selected providers.
Scope	Search by "Complete" or "Partial" deliveries
CR Status	Search by "In progress" or "Resolved" deliveries
Branch	In case you specify the branch name, this selector will present you available brach names to search for
Status	This selector allows to search deliveries based on Audit status (OK or Failure)

Change Request

Select **Life Cycle > Change Requests** to display deliveries grouped by the Change Request they belong to.

This option would be useful, for example, when you need to know how many deliveries are associated with a CR (providing an indicator of the quality of the delivery process).

For every CR, Kiuwan displays information as shown in the picture.

The screenshot displays the Kluwan Code Analytics dashboard. At the top, there are navigation tabs for 'kluwan', 'CODE ANALYTICS', 'SOURCES', 'GOVERNANCE', and 'KLUWAN'. The main header shows the date range '2018-04-26 - 2018-04-26' and a 'Close All' button. Below the header is a table with the following columns: Delivery label, Date, Application, Change impact, Branch, Status, Score, and Files.

Delivery label	Date	Application	Change impact	Branch	Status	Score	Files
▶ V1.4	2018-06-28 11:30	HeadsT Training	CR #1	Dev	🟢	75	1
▶ V1.3 Delivery	2018-06-28 09:23	HeadsT Training	CR #1	-	🔴	0	1
▶ V1.2 Delivery	2018-06-28 09:12	HeadsT Training	CR #1	-	🟢	100	20
▶ V1.1 Delivery	2018-06-28 09:08	HeadsT Training	CR #1	-	🟢	0	21
▶ V1.0	2018-06-27 17:12	A Simple Chess Game	Changepull 1	-	🟢	100	18
▶ V1.0	2018-06-25 13:32	A Simple Chess Game	Changepull 1	-	🟢	100	18

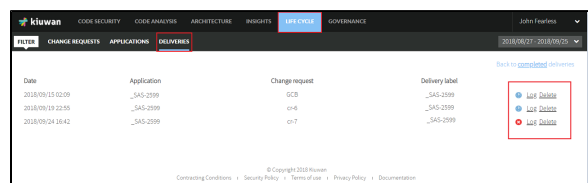

Below the table, there are two charts. The first chart, 'Provider Chess history', is a bar chart showing the number of deliveries and buildouts for different providers. The second chart, 'Dates', is a bar chart showing the number of deliveries and buildouts for different dates.

The above tabs display deliveries or analyses that finished without any technical error condition.

- Failed = the analysis failed for some reason (check the log to see the exact reason), and there will not be any results for it.
- In progress = the local analysis finished but the second phase (performed at the cloud) is still executing.

For every delivery, you can see the **status** (running or failed). Also, you can access the **log** page and/or **delete** the current analysis.

Click **Back to completed deliveries** to go back to the Deliveries tab.
