

How does Kiuwan Code Security perform in the OWASP Benchmark?

The OWASP Benchmark is a test suite designed to evaluate the coverage and accuracy of automated vulnerability detection tools.

The chart below shows the performance of Kiuwan Code Security for the latest version of the OWASP Benchmark, as of **November 2019**. The results show that Kiuwan (at position K) detected 100% of true positives, correctly identifying all vulnerabilities present in the test application.

For more details about the OWASP Benchmark and Kiuwan Code Security, read our [original blog post from 2017](#), or [review our most recent results and run your own test](#).
