# [2024-04-11] Change Log

This release contains the following improvements and fixed issues for **Kiuwan Cloud**:

**Latest Versions**

- Agent: master.1808.p682.q13317
- Engine: master.p682.q13317.a1910.i654
- Cloud: 2.8.2402.2

## Improvements

### Insight checkpoint based on vulnerabilities

- This release includes a new Insight checkpoint based on component vulnerabilities. This checkpoint allows you to filter by group, component name or version, and by vulnerability severity risk

### REST API endpoint to set up users and manage Life Cycle Permission

- Kiuwan now allows to add users and set user permissions for VIEW_LIFE_CYCLE access rights through REST API

## Fixed Issues

- **SAS-6799** KLA is no longer vulnerable to CVE-2022-42889 defect
- **SAS-6803** Muting and commenting specific lines in a sink group are no longer replicating in other lines
- **SAS-6628** Defect status is now propagating correctly when promoting the delivery analysis to baseline analysis
- **SAS-6910** The overflow caused by a *LOC Limit* high value in newly created Scan accounts has been solved
- **SAS-6914** Package */KiuwanLocalAnalyzer/lib/gson-2.8.5.jar* is updated
- **SAS-6915** Package */KiuwanLocalAnalyzer/lib/log4j-1.2.12.jar* is updated
- **SAS-6907** *Cobol.include.marker* property is analyzing the code as expected
